**To whom it may concern**

**Coating Equipment Elite CL 450 for Film and Sugar Coating**

We purchased in 2004 the above equipment, which was constructed, delivered and installed by NICOMAC srl, I-20060 Liscate (Milano), Italy. The equipment consists of the Coating Pan with Spraying Units for Sugar and Film Coating, Control System Microlac 3.0 (PC included), and Dedusting Unit for the outlet air. The air handling unit for the inlet air was supplied by Seven Air Switzerland, but integrated into the coating system by Nicomac.

The installation, together with IQ and PQ was carried out by Nicomac personnel, together with local assistance. Since January 2005 the coater is in constant use, both for film and sugar coating, mostly in 2-shift operation. Adaptation of existing coating procedures did not cause any major problems and training of operators was simple and fast.

We are pleased to confirm that the equipment works well and to our complete satisfaction. Service is fast and competent. Only the dedusting unit could need an improvement in view of better retaining certain dusts depending on the coating formulation (as far as we are informed this has been changed already).
